## Office Action Summary

Application No.

09/939,535

Applicant(s)

HOLMES ET AL.

Examiner

Jacqueline F. Stephens

Art Unit

3761

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 28 February 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1, 2, 4, 6, 9-12, 14-20, 26-33, 35-43, 57, 58, 60-63, 65, 68-70, 72-77 is/are pending in the application.
- 4a) Of the above claim(s) 1, 2, 4, 6, 9-12, 14-20, 27-33 and 35-42 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 26, 43, 57, 58, 60-63, 65, 68-70 and 72-77 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- ☐ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: \_\_\_\_\_

## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed 6/16/05 have been fully considered but they are not persuasive.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., an upper layer having an entire bottom surface area that is greater than an entire surface area of a top surface of a lower layer) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). The claims do not specifically recite 'surface area'.

Applicant's arguments with respect to claims 43 and 65 are persuasive.

### ***Drawings***

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the lower layer comprising a plurality of separate pieces must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate

Art Unit: 3761

prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 26, 57-58, 60-63, and 68 are rejected under 35 U.S.C. 102(b) as being anticipated by Everett et al. WO 99/17695.

As to claim 26, Everett discloses an absorbent material comprising: an upper layer 48 including pulp fluff and superabsorbent material and a lower layer 50 including pulp fluff and superabsorbent material (page 20, line 26 through page 21, line 24);

Art Unit: 3761

wherein the absorbent material has a thickness in a range of between 0.5 and 7.5 mm (page 13, lines 9-12), and an absorbent capacity between about 14 and 40 grams 0.9 w/v% saline solution per gram of absorbent material (page 23, lines 11-19), and the lower layer has a greater density than the upper layer (page 21, lines 10-24; page 78, line 6-9 and page 80, lines 3-5. Everett discloses the upper layer comprises between 20 and 75wt%, which includes a component of the range of between 10 and 80% superabsorbent (page 78, lines 15-16). As to the limitation of the upper layer comprising a bottom surface encompassing an entire surface of the upper layer that faces the lower layer, the examiner interprets this limitation as the bottom surface of the upper layer includes the entire surface of the upper layer that faces the lower layer, which is inherent in Everett. Additionally, the examiner interprets the lower layer having a top surface encompassing an entire surface of the lower layer that faces the bottom surface of the upper layer to mean the lower layer has a top surface that includes the entire top surface that faces the upper layer, which is also inherent in Everett. As to the limitations of the upper layer being drum -formed and the lower layer being air laid, these limitations are directed to a process of making the article. "Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985) (citations omitted). MPEP 2113.

The upper layer 48 comprises a bottom surface facing the lower layer 50 (Figure 1). Applicant has not defined the surface area relative to the claims. Giving the broadest reasonable interpretation, the examiner considers any portion of the bottom surface of the upper layer as a surface area, which can be larger than any portion of the top surface of the lower layer, thereby meeting the claim limitations.

As to claim 57, Everett discloses an upper layer of density  $0.03 \text{ g/cm}^3$  -  $.4 \text{ g/cm}^3$  (page 78, lines 7-8). Everett discloses the lower layer has a density of not less than about  $0.1 \text{ g/cm}^3$  and not more than about  $0.3 \text{ g/cm}^3$  (page 80, lines 3-4).

As to claim 58, Everett discloses the upper layer comprises between 20 and 75wt%, which includes the range of between 20 and 70% superabsorbent (page 78, lines 15-16).

As to claim 60; see page 13, lines 9-12.

As to claim 61, Everett discloses the absorbent material has an absorbent capacity of at least 16 grams w/v% saline solution per gram of absorbent material (page 23, lines 11-19).

As to claim 62, Everett discloses two or more layers (page 25, lines 34-35).

As to claims 63, Everett discloses a plurality of layers on the upper layer (page

Art Unit: 3761

79, claim 12).

As to claim 68, Everett discloses various forms of the absorbent article, see page 6, lines 16-25 directed toward an intended use of the article.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 43, 65, 69-70, 72-77 are rejected under 35 U.S.C. 103(a) as being unpatentable over Everett in view of Osborn, III.

As to claims 43 and 65, Everett discloses an absorbent garment comprising: a

chassis defining a waist opening and first and second leg openings: the chassis including a liquid-permeable body side liner, an absorbent assembly, and a substantially liquid-impermeable outer cover layer (page 15, lines 9-18). Everett discloses an absorbent material comprising: an upper layer 48 including pulp fluff and superabsorbent material and a lower layer 50 including pulp fluff and superabsorbent material (page 20, line 26 through page 21, line 24); wherein the absorbent material has a thickness in a range of between 0.5 and 7.5 mm (page 13, lines 9-12), and an absorbent capacity between about 14 and 40 grams w/v% saline solution per gram of absorbent material (page 23, lines 11-19), and the lower layer has a greater density than the upper layer (page 21, lines 10-24; page 78, line 6-9 and page 80, lines 3-5). The limitations of the upper layer being drum -formed and the lower layer being air laid are directed to a process of making the article. "Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985) (citations omitted). MPEP 2113.

Everett does not disclose the lower layer comprises a plurality of separate pieces placed in desired location of the absorbent assembly. Osborn discloses an absorbent product with a segmented absorbent core for the benefit of providing independent segments each able to move in the Z-direction without constraints and takes into

Art Unit: 3761

account the front-to-back differences in the shape of the body of the wearer and thus allows a more accurate and comfortable fit (Osborn, Abstract and col. 2, lines 13-20). One of ordinary skill in the art would be motivated by the teachings of Osborn to modify the lower layer to have a segmented core for the benefits taught in Osborn.

As to claim 69, Everett discloses an upper layer of density  $0.03 \text{ g/cm}^3$  -  $.4 \text{ g/cm}^3$  (page 78, lines 7-8). Everett discloses the lower layer has a density of not less than about  $0.1 \text{ g/cm}^3$  and not more than about  $0.3 \text{ g/cm}^3$  (page 80, lines 3-4).

As to claim 70, Everett discloses the upper layer comprises between 20 and 75wt%, which includes the range of between 20 and 70% superabsorbent (page 78, lines 15-16). Everett discloses the upper layer comprises between 20 and 75wt%, which includes a component of the range of between 10 and 80% superabsorbent (page 78, lines 15-16).

As to claim 72, see page 13, lines 9-12.

As to claim 73, Everett discloses the absorbent material has an absorbent capacity of at least 16 grams 0.9 w/v% saline solution per gram of absorbent material (page 23, lines 11-19).

As to claim 74, Everett discloses two or more layers (page 25, lines 34-35).

As to claims 75 and 76, the limitations of the upper layer being drum -formed and the lower layer being air laid are directed to a process of making the article. "Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985) (citations omitted). MPEP 2113.

As to claims 77, Everett discloses a plurality of layers on the upper layer (page 79, claim 12).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jacqueline F. Stephens whose telephone number is (571) 272-4937. The examiner can normally be reached on Monday-Friday 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tanya Zalukaeva can be reached on (571) 272-1115. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
